## Easy Divorce

A brave of the tribe of Onchida  
Had a wife, but he couldn't abide her.  
He built up a fire.  
As the flames mounted higher  
He cut her in pieces and fried her.

## CANCER IS A COMMON DISEASE OF FISH

Buffalo, May 23.—The discovery that cancer is a very common disease with many kinds of fish, and especially brook trout, has been made.

Dr. Harvey R. Gaylord, head of the Buffalo State Cancer Laboratory, announced today that scientists connected with that institution are now conducting a new line of experimentation to discover whether or not cancer is communicated to human beings by the fish they eat or whether the water of streams is infected by the cancer germ from the fish.

This new discovery on which the cancer experts are working may give a clue to the manner in which cancer is communicated to the human system. Heretofore cancer research had been conducted chiefly along the lines of a hunt for a cure. The disease was found to be most prevalent in mice and rats, and most of the experiments have been performed with these animals as suspects.

While it is an established fact that cancer is a common disease among fish, there is no certainty that this is the source of infection of human beings. Dr. Gaylord said to-day:

"There is no certainty that cancer comes from fish. We are conducting a vigorous line of experiments, however, to find out if it does. These experiments have not gone far enough yet to warrant giving any opinion on the matter. The discovery that cancer exists among fish was made by a French scientist. A study of fish has shown that the disease is quite common among this species of animal life. It is found that the gills of fish are the parts affected. The disease is found in many varieties of fresh water fish, and many sea fish have also been found which are so diseased."

While Dr. Gaylord was quite guarded in his statements as to the effect of this discovery and the result of the experiments which are now being carried on, it is known that officials of the State Forest, Fish and Game Commission are much interested. Infected fish are now furnished to the cancer

laboratory in this city by the state hatcheries for these experiments.

The fish experiments are being conducted along two lines—first, to see whether the fish infect the water in which they live, and second, whether the cancer germs are entirely destroyed by the heat of cooking.

Dr. Gaylord said yesterday that this new line of experiment had been greatly handicapped by the refusal of the Legislature to increase the annual appropriation for the laboratory. This increased appropriation was asked to enlarge the facilities for these experiments on fish.

## FINE BAND CONCERT AT MOANA TODAY

Kapellmeister Berger has prepared a special program for the Royal Hawaiian band and will give a concert this afternoon at 3 o'clock at Moana hotel. The concert was arranged originally for Kapiolani Park but there are so many visitors at the Moana and the site is so delightful for a concert that the place has been changed.

Honolulu people should hear this concert and at the same time enjoy an outing on the beach. The combination of music cool breezes and surf is simply delightful.

## SUNDAY SERVICE FOR GRADUATES

The Sunday service for the graduating classes of Oahu College will be held tonight in Central Union church at 7:30 o'clock. Rev. Amos A. Eber-sole will preach the sermon on the subject, "Ultimate Ideals." The College Glee Clubs, assisted by Mrs. Mackall and Miss Clarke, under the direction of Miss Rogers, will furnish the music. Both graduating classes will attend in a body and will sit in sections reserved for them.

If you are looking for a quiet rooming hotel near the heart of the business district go to Hotel Majestic, corner Fort and Beretania streets, Sachs' block.
